**RE: FLHS Window Replacement Project
PCB testing of two classrooms**

This letter is to notify you that the Fairfield Public School district is scheduling the Polychlorinated Biphenyl (PCB) testing of two classrooms at the Fairfield Ludlowe High School. This will be scheduled for this Saturday, February 11, 2012. The testing is to be performed in classrooms 203 and 220. These two classrooms were reported to have interior elevated levels of PCB's from the initial testing performed on October 21, 2011.

The Town Facilities Commission (TFC) is working on this project through the direction of the First Selectman. The TFC is expected to present to the Board of Selectmen a funding request to continue to the second round of PCB testing (which is required) and eventually an action plan (which is required) to deal with the findings, and more importantly, to outline a funding request for the entire window replacement project.

The Central Office Administration, in discussions with the Fairfield Health Department and the State of Connecticut Environmental Protection Agency, decided to move forward with these two classroom tests because the elevated levels were detected on the interior of the classrooms.

If you have any concerns regarding the PCB testing, please feel free to contact me.

Thank you.

c: Beverly Dyer
