GRADE 8 TRANSPORTATION TECHNOLOGY

Description

This course is a basic study of transportation systems focusing primarily on the four modes of transportation, land, marine, atmospheric, and space. The student will also explore energy resources, alternative means for energy and their effects upon the environment. Students will engage in the construction of models incorporating simple machines and apply science and math concepts to test and evaluate the outcome.

Course Overview				
 Course Objectives Students should: develop an understanding of the influence of technology on history. select and use transportation technologies. understand the technical, social and environmental aspects of transportation systems. select and use energy and power technologies. demonstrate an understanding of problem solving techniques. select and use manufacturing technologies. demonstrate the use of the engineering design process. develop an awareness of careers in transportation technology. 	 Essential Questions What are typical modes of transportation for moving people and/or goods? Can you identify the strengths and weaknesses of transportation systems? How do you apply transportation concepts to vehicle engineering? What are some innovations in transportation in the US? How can engineering design and modern materials help improve transportation? What decisions relate to the use of energy? How do individual decisions about transportation and energy use affect society and the environment? 	Assessments Common Assessments • Evaluation Rubric Skill Assessments • Teacher observation • Students demonstration • Writing prompts • Test/quizzes		
Content OutlineI.Unit 1— Introduction to Transportation TechnologyII.Unit 2— Air/SpaceIII.Unit 3- LandIV.Unit 4- MarineV.Unit 5- IntermodalVI.Unit 6- Energy	 <u>Standards</u> Connecticut State Technology Education standards have been met in the following areas: <i>Transportation Tech</i> 	 Grade Level Skills Students will: utilize basic skills to develop and modify projects. analyze and apply scientific laws affecting vehicles. design and develop projects that utilize the core areas of transportation technology.

Week 1	Week 2 We	ek 3 Week 4	Week 5	Week 6 We	ek 7 Week 8	Week 9
Unit 1	Unit 2	Unit 3		Unit 4	Unit 5	Unit 6
Introduction to Transportation <u>Tech</u>	<u>Air/Space</u>	Land		<u>Marine</u>	Intermodal	<u>Energy</u>
1 week	1.5 weeks	3 weeks		1.5 weeks	1 week	1 week

Unit 1 – Introduction to Transportation Technology, 1 week top Standards Transportation Technology TRAN.01 Identify historical, social, economic, environmental, and government regulations impact transportation technology. TRAN.01.01, TRAN.01.02 Unit Objectives **Essential Questions** Assessments Students will be able to: How have historical innovations assisted in the Teacher observation • • describe how society uses resources and evolution of transportation systems? Quiz on modes of transportation • ٠ distributes its goods and services. Student demonstration of problem solving • engage in problem solving activity(s). **Focus Questions** ٠ solutions describe how technological developments What is transportation? ٠ ٠ have changed how goods and people are How do humans move people and things? ٠ transported. How do engineers think about problem solving? Skill Objectives ٠ Students will: • solve engineering related "problem solving activities" with other students. engage in design challenges to solve ٠ problems in moving objects.

Unit 2 – Air/Space, 1.5 weeks <u>top</u>

<u>Standards</u>

Transportation Technology

 Unit Objectives Students will be able to: demonstrate how propulsion, control, guidance, payload, and support systems are 	 Essential Question How has mankind benefitted from air and space travel? 	 Assessments Teacher observation Quiz on air and space transportation Air/space project grading rubric
 describe the impact of air and space travel on the 21st century. 	 • What makes a vehicle fly? • What must designers consider when developing an air/space vehicle? • Why is feedback so important to the vehicle design process? 	 Skill Objectives Students will: classify types of air and space vehicles. apply principles of flight. apply the design process – measure, drawings, sketching, working with computers and tools. discuss proposed design with teacher and make modifications. construct, test, evaluate and modify a design. test and modify air/space vehicle.

Unit 3 – Land Transportation 3 weeks top

<u>Standards</u>

Transportation Technology

 Unit Objectives Students will be able to: design, build and evaluate a simple fixed path or variable path transportation system. describe the importance of land transportation on society worldwide. 	 Essential Question Why is land transportation so important to the economy of the United States? Focus Questions Why do you consider aerodynamics in vehicle body design? What needs to be considered when designing a land vehicle? Why is vehicle performance important? 	 Assessments Teacher observation Quiz on land transportation Land project grading rubric Skill Objectives Students will: create design sketches. design, build and evaluate a simple land transportation system. discuss proposed design with teacher and make modifications. test and modify land vehicle.
--	--	---

Unit 4 – Marine, 1.5 week top

<u>Standards</u>

Transportation Technology

 Students will be able to: apply the design process – measure, drawings, sketching, working with computers and tools. solve a simple marine transportation problem by designing, building, and testing a vehicle that will carry a payload a specified distance. 	 How has marine transportation impacted the history of Western civilization? Focus Questions Why are different hull designs used in different settings? What needs to be considered when designing a marine vehicle? Why do we need the design process? 	 Water transportation question sheet Boat project rubric Teacher observation Skill Objectives Students will: classify types of water transportation. apply principles of density to boat flotation. discuss proposed design with teacher and make modifications. Construct, test, evaluate and modify a design. test and modify vessel in water tank.
---	--	---

Unit 5 - Intermodal, 1 week <u>top</u>

<u>Standards</u>

Transportation Technology

Unit Objectives	Eccontial Question	Aggoggmonta
 Students will be able to: apply transportation principles to intermodal design. apply the design process – measure, drawings, sketching, working with computers and tools. use design-based learning approaches that intentionally integrate the content and process of science and/or mathematics education with the content and process of technology and/or engineering education. 	 What impacts do intermodal transportation systems have on urban life? Focus Questions Why are intermodal vehicles developed? Who could benefit from the use of an intermodal vehicle? What might be some design challenges in developing intermodal vehicles? 	 Intermodal transportation question sheet Intermodal project rubric Teacher observation Skill Objectives Students will: identify types of intermodal vehicle. create design sketches. discuss proposed design with teacher and make modifications. construct, test, evaluate and modify a design. test and modify intermodal vehicle.

Unit 6 - Energy, 1 week <u>top</u>			
Standards Transportation Technology TRAN.02 Identify historical, social, economic, environmental, and government regulations impact transport trans	essments Energy question sheet Energy project rubric Teacher observation Energy project rubric Teacher observation
