

Healthy Vending Machines

Healthy Vending machines were installed at Ludlowe High and Warde High on March 9th and March 10th.

These new machines are refrigerated and contain sandwiches, salads, snacks, milk, juice and water.

The benefits of using healthy vending machines are:

- Expand serving hours for those students who do not have a lunch period
- Expand serving hours for those students who are at school after school hours
- Students can use cash or use their pre-paid lunch account for purchases
- Refrigerated machines are stocked with healthy food and beverages to help students to make nutritious food choices on their own
- Reimbursable meals can be dispensed from the vending machine as well as a la carte purchases
- Machines are configured to automatically stop dispensing if the food temperature rises to an unsafe level
